### **DETAILED ACTION**

## Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 5-8 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 5-8 are drawn to a "program" per se as recited in the preamble and as such is/are non-statutory subject matter. See MPEP § 2106.IV.B.1.a. Data structures not claimed as embodied in computer readable media are descriptive material per se and are not statutory because they are not capable of causing functional change in the computer. See, e.g., Warmerdam, 33 F.3d at 1361,31 USPQ2d at 1760 (claim to a data structure per se held nonstatutory). Such claimed data structures do not define any structural and functional interrelationships between the data structure and other claimed aspects of the invention, which permit the data structure's functionality to be realized. In contrast, a claimed computer readable medium encoded with a data structure defines structural and functional interrelationships between the data structure and the computer software and hardware components which permit the data structure's functionality to be realized, and is thus statutory. Similarly, computer programs claimed as computer listings per se, i.e., the descriptions or expressions of the programs are not physical "things." They are neither computer components nor statutory processes, as they are

Art Unit: 2626

not "acts" being performed. Such claimed computer programs do not define any structural and functional interrelationships between the computer program and other claimed elements of a computer, which permit the computer program's functionality to be realized.

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Koehn (PGPUB 2005/0033565).

Regarding **claim 1**, Koehn discloses a method of displaying a compound word, the method comprising:

locating a component word within said compound word (figures 4 and 5 with columns 2-3, paragraphs 0019-0029); and

displaying said compound word with said component word visibly distinguished from the remainder of said compound word (figures 4 and 5 with columns 2-3, paragraphs 0019-0029).

Application/Control Number: 10/671,096

Art Unit: 2626

Regarding claim 2, Koehn discloses a method further comprising:

receiving said component word as user input (figures 4 and 5 with columns 2-3, paragraphs 0019-0029);

based on said component word, selecting, from a plurality of resources, one or more resources that are associated with said component word (figure 2, element 230 with column 1, paragraphs 0016-0017 and columns 2-3, paragraphs 0019-0029).

Regarding claims 3, Koehn discloses a method further comprising:

displaying one or more portions of said one or more resources, one or more resources that are associated with said component word (figures 4 and 5 with columns 2-3, paragraphs 0019-0029).

Regarding **claim 4**, it is interpreted and rejected for the same reasons as set forth in the combination of claims 1 and 2.

Regarding **claims 5-8**, Koehn discloses a computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method (claim 14).

### Conclusion

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
  - Van Aelten et al. (USPN 6,349,282) disclose compound words in speech recognition systems.

Application/Control Number: 10/671,096 Page 5

Art Unit: 2626

 Park (PGPUB 2003/0233235) discloses a system, method, program product, and networking use for recognizing words and their parts of speech in one or more natural languages.

- Noble (USPN 6,729,882) discloses phonetic instructional database computer device for teaching the sound patterns of English.
- Mackie (PGPUB 2003/0097252) discloses a method and apparatus for efficient segmentation of compound words using probabilistic breakpoint traversal.
- Emam et al. (USPN 6,738,741) disclose a segmentation technique increasing the active vocabulary of speech recognizers.
- Even (USPN 6,393,399) discloses compound word recognition.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jakieda R. Jackson whose telephone number is 571.272.7619. The examiner can normally be reached on Monday through Friday from 7:30 a.m. to 5:00p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Hudspeth can be reached on 571.272.7843. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
